

Professional Summary

Full Stack Developer with experience building enterprise SaaS and IoT platforms using Angular, Node.js, PostgreSQL, DynamoDB, Redis and Kafka. Contributed to cloud-to-on-prem synchronization systems, real-time monitoring dashboards, and AI-powered developer tools. Strong foundation in system design, scalable architectures, and Data Structures & Algorithms.

Technical Skills

Backend: Node.js, Sails.js, Express.js, Django, REST APIs
Frontend: Angular, TypeScript, RxJS, PrimeNG, Apache ECharts
Databases: PostgreSQL, MongoDB, DynamoDB, InfluxDB, SQLite
Cloud & DevOps: AWS EC2, Docker, PM2, Redis, Kafka, Claude SDK, MCP Servers

Professional Experience

DEVELOPER INTERN (FULLSTACK)|SMARTJOULES| *OKHLA(Hybrid)*| FEB 2026 – PRESENT

DeJoule Energy Management Platform (IoT-Based BMS)

- Developed backend APIs and event-driven synchronization services using **Node.js, Sails.js, PostgreSQL, DynamoDB, Redis, and Kafka** for a hybrid Cloud + On-Prem BMS deployed across **10+ customer sites**.
- Built automated failover and synchronization workflows that maintained uninterrupted operations during network outages lasting up to **3+ days without manual intervention**.
- Developed a reusable migration framework that automated onboarding for **5 customer sites**, migrating data across **18 DynamoDB and PostgreSQL tables** containing devices, components, alerts, commands, operational modes, and configuration data.
- Contributed feature development, production enhancements, and issue resolution across **5 customer-facing microservices** within a **18-microservice IoT platform** supporting smart alerts, monitoring, notifications, and workflow automation.

HVAC Dashboard (DeJoule Energy Management Platform)

- Developed **15+ backend APIs** and refactored **40+ existing APIs** using **Node.js, Sails.js, PostgreSQL, InfluxDB** to improve maintainability and time-series data processing.
- Built and deployed **4 Angular-based dashboard widgets** using **TypeScript, RxJS, PrimeNG, and ECharts** for monitoring HVAC performance, automation coverage, operational health, and alert management.
- Optimized graph queries and data retrieval pipelines, reducing line-chart rendering latency by approximately **50 ms** and improving dashboard responsiveness.
- Owned end-to-end delivery of dashboard features from implementation through deployment, supporting facilities with **300+ equipment components and thousands of connected devices**.

PRODUCT ENGINEERING INTERN | SIRION LABS | GURUGRAM | AUG 2025 – FEB 2026

- Developed and implemented Salesforce Connector packages for the Sirion CLM platform, enabling seamless synchronization of contract and workflow data between Salesforce and Sirion.
- Developed internal workflow automation tools using Django, React, PostgreSQL, and REST APIs that streamlined repetitive operational processes, reducing manual effort by **30%** and improving efficiency for product and support teams.
- Investigated and resolved client-reported production issues, collaborated with engineering teams on root cause analysis, release validation, and Agile software delivery processes within a large-scale enterprise SaaS environment.

Projects

1. DSA Progress Analyzer

Next.js 15, TypeScript, Supabase, Drizzle ORM, Claude Code SDK, Recharts, TanStack Query

- Built an AI-powered LeetCode analytics platform that synchronizes solve history, tracks topic mastery, and generates personalized study plans based on user performance.
- Architected the application using **Hexagonal Architecture**, separating domain logic, AI orchestration, database access, and presentation layers for maintainability and scalability.
- Integrated **LeetCode GraphQL APIs** and **Claude Code SDK** to compute company-specific interview readiness metrics and generate AI-driven learning recommendations.

2. Claude Agents

- Developed agentic automation tools using **Claude Code SDK** as the reasoning engine, enabling natural language interactions with databases and external tools.
- Built a **Natural Language-to-SQL PostgreSQL agent** with multi-layer read-only guardrails, allowing safe querying of production databases while preventing destructive operations.
- Implemented an MCP (Model Context Protocol) server and reusable agent framework for tool integration, conversation-aware workflows, and rapid development of AI-powered automation agents.**

Education

Master of Computer Applications (MCA) – Babasaheb Bhimrao Ambedkar University, Lucknow

CGPA-7.2 | 2023-25

Bachelors in Computer Science (B.Sc) – Pondicherry University, Puducherry

CGPA-8.2 | 2020-23

Certifications
